

DAYTON STREET NATURAL GAS PROJECT

FALL 2026

Overview

Xcel Energy is working in your area to install natural gas line and replace service lines and meters around Dayton Street, between Montview Boulevard and 8th Avenue, in Aurora, Colorado.

This work allows us to continue to provide safe, reliable natural gas service throughout the community.

Schedule

Construction is expected to begin in fall 2026 and continue through winter 2027.

Schedules are subject to change.

Construction

During work, you may notice:

- Marking of utility lines and utility survey holes
- Road and sidewalk closures with parking restrictions
- Temporary changes to access
- Construction noise
- Work area restoration as weather allows

We will install the natural gas line by open trenching which involves digging a trench and placing the natural gas line in the trench.

This map is a graphic and may not show exact locations.

DAYTON STREET NATURAL GAS PROJECT

Safety overview

The safety of the public around our natural gas system influences every decision we make. We take a proactive approach to public safety by implementing safety measures before, during and after construction.

The project has been designed to meet federal and state standards and safety requirements for installing, maintaining and operating natural gas infrastructure.

Learn to recognize a natural gas leak

If you ever suspect a natural gas leak, leave your home or business immediately. Once safely away, call **911**, then Xcel Energy at **800-895-2999**.

It is important to know how to recognize potentially dangerous natural gas leaks, so use your senses. Signs of a natural gas leak include:

- A “rotten egg” or sulfur-like odor, though it may smell differently to you
- Hissing, whistling or roaring sounds outside near the natural gas line or inside near an appliance
- Dirt spraying into the air or continuous bubbling in a pond or creek
- Unexplained dead or dying vegetation

Call before you dig

A common cause of natural gas incidents results from improper or unauthorized digging near underground utilities. Prior to digging, call **811** or visit colorado811.org to have buried utility lines located and marked. This helps prevent dangerous conditions that result from damaging a buried line.

Natural gas construction safety

During construction and installation of the natural gas line, we:

- Implement a corrosion prevention system designed to eliminate metal loss
- Verify pipe welds using an independent third party

Once the line has been installed and prior to putting it into service, we:

- Internally inspect the line
- Perform internal pressure tests to verify the line’s integrity

During the lifetime of the natural gas line, we:

- Conduct annual hazard patrols and leak surveys and regularly inspect the line
- Monitor (24/7) the line and other infrastructure through our staffed gas control center

Be aware of scams

At no time will any on-site Xcel Energy employee or authorized contractor associated with the Dayton Street Natural Gas Project need to obtain account information.

All Xcel Energy employees and most contractors who perform work for us carry company IDs. Ask to see a company ID if someone on your property claims to be working for Xcel Energy, regardless of the work being performed. If the person cannot show you an ID, ask them to leave and return only with proper identification.

Some contractors working on our behalf may not have Xcel Energy IDs. If you would like to verify that the contractor is authorized to work on our behalf, please call Customer Care at **800-895-4999** or visit xcelenergy.com/IdentifyingAuthorizedWorkers.
